

Steeline Dry Verge

BARGE SOAKER

ST06

Colorbond® Zincolume®

Steeline dry verge is a rolled formed product that eliminates joins in soaker on the gable ends of buildings with a tiled roof. With the use of the dry verge there is no need for any cement pointing of tiles, as dry verge forms a small gutter under the tiles which flows into the back of the gutter at the bottom of the gable. Aesthetically pleasing, and is made from Colorbond or Zincolume. It eliminates leaks at gable ends.
