

# STRAMIT® COMMERCIAL EAVES GUTTER

Precision made and performance tested

**Backed by technical testing for peace of mind, the Stramit® Commercial Eaves gutter is a smart choice for commercial and industrial buildings of scale.**

## QUALITY GUTTERS MADE WITH PRECISION

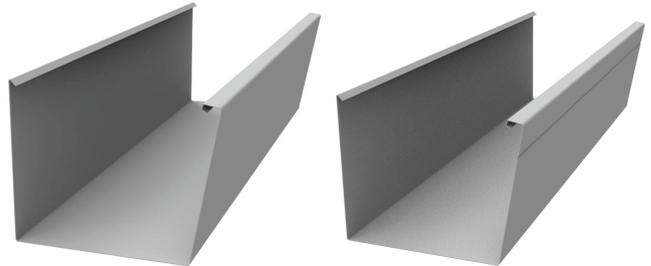

The Stramit® Commercial Eaves gutter is manufactured with mechanical precision, not by hand, to ensure a consistent and high-quality finish. Stramit offers a wide range of rainwater products specifically designed to accommodate varying amounts of rainfall across Australia. Available in lengths ranging from 500mm to 9000mm, the large Stramit® Commercial Eaves gutter design can capture high levels of rainfall and allows for a 150mm downpipe.

## BACKED BY TECHNICAL TESTING

The Stramit® Commercial Eaves gutter has been put through its paces in Stramit's purpose-built national testing facility against Australian industry building codes and regulations. Its design features a lower front allowing water to overflow as required by the National Construction Code 2019. Downpipe selection data is available from Stramit Technical Services for large roofing areas, to a maximum slope of 10-degrees. These results support the design and planning process, helping to make informed choices in today's strict compliance environment.

## A ONE-STOP-SHOP

A Stramit® Commercial Eaves gutter can be supplied in combination with Stramit's extensive range of commercial roofing, walling, rainwater and structural products to form a complete building system that comes together seamlessly. This avoids the risk of mixing products that might reduce the reliability, safety or performance of your build.

Effective cross sectional area 35200 mm<sup>2</sup>
