# STRAMIT SPEED DECK® 500

CONCEALED FIXED DECKING

## Selection & Specification

### Features

- 500mm Cover – easy sheet coverage calculations.
- Hi-tensile Steel – lightweight and high strength with improved damage resistance.
- Bold Ribs – provide better performance with an architecturally pleasing profile.
- Quick Installation – wide design provides fewer clips (preloaded if desired) ensuring effective cost saving.
- Secret Fixing – concealed clips for enhanced security
- 1° Minimum Pitch – in long lengths to save support structure.

- Fully Tested – a full range of load performance tables to suit almost any application.

### Applications

The visual appeal, light weight and weather resistance of **Stramit Speed Deck® 500** decking make it ideal for many commercial roofing applications. The large water-carrying capacity and weather-tightness permit very low roof pitches, leading to economies in the building structure.

**Stramit Speed Deck® 500** cladding is only intended for use in commercial / industrial / residential roof or wall cladding applications. Do not use for any other purpose.

### IMPORTANT NOTE

The information contained within this brochure is for general use and information only. Before application in a particular situation, Stramit recommends that you obtain appropriate independent qualified expert advice confirming the suitability of product(s) and information in question for the application proposed. While Stramit accepts its legal obligations, be aware however that to the extent permitted by law, Stramit disclaims all liability (including liability for negligence) for all loss and damage resulting from the use of the information provided in this brochure.

## Materials

**Stramit Speed Deck® 500** decking is manufactured from hi-tensile G550 colour coated steel, aluminium-zinc-magnesium alloy coated or zinc-aluminium alloy coated steel. In some locations galvanised and severe environment colour coated steel may be available by arrangement. Colour coated steels are in accordance with AS2728 – Category 3 and, for the substrate, with AS1397. Aluminium-zinc-magnesium alloy coated AM100/AM125, zinc-aluminium alloy coated AZ150 and galvanised Z450 conform to AS1397.

Stramit has a comprehensive range of colours as standard. Ask your nearest Stramit location for colour availability.

### STRAMIT SPEED DECK® 500 DECKING – SHEET MASS (kg/m<sup>2</sup> of roof area)

	ZINCALUME®	COLORBOND®	GALVANISED
0.42mm BMT	4.72	4.80	5.14
0.48mm BMT	5.36	5.44	5.78
0.60mm BMT	6.64	6.72	7.06

## Adverse Conditions

**Stramit Speed Deck® 500** decking will give excellent durability in almost all locations. With all of its fastenings protected beneath the decking, **Stramit Speed Deck® 500** decking can be expected to outlast through-fixed roofing. It is however important to choose the correct coating for each application environment. The table below shows the suitability of coating types for different exposure conditions.

suitability of coating type	site exposure condition				
	benign	moderate	marine	severe marine	very severe marine
ZINC-ALUMINIUM (AZ150)	✓	✓	✗	✗	✗
ZINCALUME® (AM125)	✓	✓	✗	✗	✗
GALVANISED Z450	✓	?	✗	✗	✗
COLORBOND®	✓	✓	✓	✗	✗
COLORBOND® ULTRA	N/A	N/A	✓	✓	✗

? Question marks indicate conditions where durability may be diminished, depending on the particular application.

The approximate site exposure conditions in the table above are defined below.

site exposure condition	distance of site from	
	breaking surf	calm surf
benign	1001m +	1001m +
moderate	401m-1000m	201-1000m
marine	201m-400m	101m-200m
severe marine	101m-200m	0m-100m
very severe marine	0m-100m	N/A

The suitability and exposure tables above are current at the time of publication and are guidelines only; conditions will vary from site to site. Please check the Bluescope Technical Bulletins at [www.bluescopesteel.com.au](http://www.bluescopesteel.com.au) for the latest information and guidance on selection, maintenance and durability. If uncertain about the appropriate coating for a particular application, or if the product is to be used in environments affected by industrial emissions, fossil fuel combustion, animal farming, or has unwashed areas, please contact your nearest Stramit office for advice.

## Compatibility

All building products need to be checked for compatibility with adjacent materials. These checks need to be for both direct contact between materials, and where water runs from one material to another. The following guidelines generally avoid material incompatibility:

- For zinc-aluminium alloy coated steel, colour coated steel and galvanised steel roofs avoid copper, lead, green or treated timber, stainless steel, uncoated steel and mortar or concrete.
- In addition galvanised steel roofs should not receive drainage from aluminium or any inert materials, such as plastics, glass, glazed tiles, colour coated and zinc-aluminium alloy. Contact Stramit for more detailed information.

## Testing

Stramit has in-house, purpose built, testing equipment used to design, develop and improve products for the Australian market. In addition many Stramit products are tested or witnessed by independent organisations. These include:

- Cyclone Testing Station (James Cook University)
- The University of Sydney
- Monash University
- CSIRO
- University of Queensland
- University of Technology, Sydney

This ongoing research and development activity ensures that Stramit remains at the forefront of innovation, design and consumer information.

## Architectural Specification

This specification can be found on the Stramit web site and can be easily downloaded onto your documentation.

The roofing/walling shall be 0.42 (0.48 or 0.60) mm BMT **Stramit Speed Deck® 500** decking, in continuous lengths with trapezoidal ribs 41mm high, spaced at 250mm centres. Sheeting material shall be protected steel sheet to AS1397 with a minimum yield stress of 550MPa (Grade G550) and an AM100/AZ150 coating with an oven-baked paint film of selected colour, or a plain AM125/AZ150 coating. The sheeting shall be fixed to the purlins/girts in accordance with the manufacturer's recommendations. Suitable fixing screws in accordance with Australian Standard AS3566, Class 3, shall be used at every rib at every support. Sheets shall be laid in such a manner that the approved side lap faces away from the prevailing weather. A minimum of 50mm shall be provided for projection into gutters. Flashings shall be supplied in compatible materials as specified, minimum cover of flashing shall be 150mm. All sheeting shall be fixed in a workman like manner, leaving the job clean and weathertight. Repair minor blemishes with touch-up paint supplied by the sheeting manufacturer. All debris (nuts, screws, cuttings, filings etc.) shall be cleaned off daily.

# Design

## Spans

The spans shown below take account of 'normal' foot traffic and wind resistance including local pressure zone effects. Pressures are based on AS4055 or AS1170.2 section 2. Where the two standards differ, the worst case has been taken for each classification. Data should only be used for buildings 7m or less in height, 1000m<sup>2</sup> or less in area, where both length and width exceed the building height and site is unaffected by land topography.

### STRAMIT SPEED DECK® 500 DECKING – MAXIMUM SPAN CHART (mm)

bmt (mm)	roofs - all areas unless noted*					roof corner areas with pitch < 10 degrees					overhangs	
	pressure service -ability	pressure strength	double spans	equal spans	internal (end) span combination	pressure service -ability	pressure strength	double spans	equal spans	internal (end) span combination	free edge	stiffened edge
<b>N1 or Region A (TC3, FS) WIND CLASSIFICATION</b>												
0.42	0.74	1.25	1100	1100	1500 (1250)	1.07	1.81	1100	1100	1500 (1250)	100	300
0.48	0.74	1.25	1700	1700	2100 (1750)	1.07	1.81	1700	1700	2100 (1750)	150	450
0.60	0.74	1.25	2200	2200	2650 (2200)	1.07	1.81	2050	1850	2050 (1700)	250	500
<b>N2 or Region B (TC3, FS) or Region A (TC2.5, PS) WIND CLASSIFICATION</b>												
0.42	1.05	1.75	1100	1100	1500 (1250)	1.53	2.53	1100	1100	1300 (1100)	100	250
0.48	1.05	1.75	1700	1700	2100 (1750)	1.53	2.53	1700	1700	1900 (1600)	150	400
0.60	1.05	1.75	2100	1900	2100 (1750)	1.53	2.53	1700	1500	1700 (1400)	200	450
<b>N3 or Region B (TC2.5, PS) or Region A (TC2, NS) WIND CLASSIFICATION</b>												
0.42	1.32	2.70	1100	1100	1250 (1050)	1.92	3.92	1000	850	1000 (800)	100	200
0.48	1.32	2.70	1700	1700	1950 (1650)	1.92	3.92	1600	1450	1500 (1250)	100	350
0.60	1.32	2.70	1600	1450	1600 (1350)	1.92	3.92	1300	1150	1300 (1100)	150	400

Internal spans must have both end spans 20% shorter. TC - Terrain category. FS, PS, NS - Full, partial and no shielding.

Values are only valid for use with steel members of 1.5mm or thicker. Where thinner supports are used, fastener capacity must be checked. Refer to Stramit® Top Hat & Battens Product Technical Manual for more information.

For more specific applications Stramit Speed Deck® 500 decking must be designed to the pressure and foot traffic limitations below.

Spans may exceed those shown in this table, provided the wind pressure and foot traffic limits are not exceeded.

## Pressures

### STRAMIT SPEED DECK® 500 DECKING – SERVICEABILITY LIMIT STATE CAPACITY

thickness bmt(mm)	fasteners per sheet at each support	span type	pressure (kPa) at the spans (mm) shown									
			600	900	1200	1500	1800	2100	2400	2700	3000

### STRAMIT SPEED DECK® 500 DECKING – STRENGTH LIMIT STATE CAPACITY (Non-cyclonic)

thickness bmt(mm)	fasteners per sheet	span type	pressure (kPa) at the spans (mm) shown									
			600	900	1200	1500	1800	2100	2400	2700	3000	
0.42	1 clip and 2 screws	internal	8.04	4.49	2.94	2.08	1.53	1.16	0.89	0.68	0.52	
		equal	6.67	3.37	2.44	1.72	1.27	0.96	0.74	0.57	0.43	
		double	8.04	4.49	2.94	2.08	1.53	1.16	0.89	0.68	0.52	
0.48	1 clip and 2 screws	internal	12.50	8.96	6.21	4.46	3.25	2.37	1.69	1.16	0.73	
		equal	10.38	7.44	5.15	3.70	2.70	1.96	1.40	0.96	0.61	
		double	12.50	8.96	6.21	4.46	3.25	2.37	1.69	1.16	0.73	
0.60	1 clip and 2 screws	internal	12.50	7.60	4.53	3.08	2.28	1.78	1.45	1.22	1.05	
		equal	10.38	6.31	3.76	2.56	1.89	1.48	1.20	1.01	0.87	
		double	12.50	7.60	4.53	3.08	2.28	1.78	1.45	1.22	1.05	

Tables are based on testing to AS1562 and AS4040 parts 0, 2 and 3. Internal spans must have both end spans 20% shorter.

Values only valid for use with steel support members of 0.75mm or thicker.

## Foot Traffic

Foot traffic limits for **Stramit Speed Deck® 500** decking are shown for three alternate foot traffic categories. These are:

- High Maintenance – for applications with repeated maintenance, particularly where personnel may be unfamiliar with correct procedures for walking on metal roofs.
- Normal – based on traditional expectations, with moderate maintenance foot traffic using designated foot paths.
- Controlled – spans that conform to ASI562 but require minimal careful foot traffic only on the designated foot path. Suggested for use only where occasional aesthetic imperfections from foot traffic are acceptable.

### STRAMIT SPEED DECK® 500 DECKING – FOOT TRAFFIC LIMITED SPANS (mm)

thickness bmt	span type	foot traffic limits		
		heavy	normal	controlled
0.42	internal	-	1500	2400
	equal	-	1100	2100
	double	-	1100	2100
0.48	internal	-	2100	3000
	equal	-	1700	2400
	double	-	1700	2400
0.60	internal	1100	2700	3600
	equal	700	2200	2700
	double	700	2200	2700

Tables are based on tests to ASI562 and AS4040 parts 0 and 1.

For more information on foot traffic performance of **Stramit Speed Deck® 500** decking and other Stramit roofing profiles refer to Stramit's Foot Traffic Guide.

## Spring Curving

**Stramit Speed Deck® 500** decking can be spring-curved, concave and convex, including curved ridges, provided it is sealed at the apex and within the recommended limits below:

### STRAMIT SPEED DECK® 500 DECKING – SPRING-CURVED RADII LIMITS (m)

bmt (mm)	performance restricted		restricted by drainage at the rainfall intensities shown		
	minimum* radius	lowest neutral radius	370 mm/hr	220 mm/hr	150 mm/hr
0.42	70*	198	210	354	>500
0.48	50*	159	210	354	>500
0.60	no data		available		

\*At these radii a maximum support spacing of 1200mm applies, and limit state pressure capacities are reduced by 14% for serviceability and 7% for strength. These reductions apply proportionately up to the lowest neutral radius.

For more comprehensive information on spring curving **Stramit Speed Deck® 500** decking and other Stramit roofing profiles refer to the Stramit Spring Curving Guide.

## Designing for Snow

Concealed fixed decking such as **Stramit Speed Deck® 500** decking is the preferred roofing material in alpine areas. This, and many other design suggestions, can be found in Australian Standards HB 106 – 'Guidelines for Design of Structures in Snow Areas'. Particular attention is drawn to maintaining an adequate roof slope for snow shedding, and screw fixing of deck pans beneath the ridge capping.

Downward load capacities for **Stramit Speed Deck® 500** decking have not been tabulated, but can be assumed to equal the outward capacities shown.

## Thermal Expansion

All metal roof sheeting is subject to thermal expansion and, where there is a temperature difference between the sheeting and the structure, this needs to be accommodated. The colour of the sheeting will affect the amount of thermal expansion, and whether the sheet is flat or curved will affect its ability to resist without problems.

**Stramit Speed Deck® 500** decking has excellent resistance to the problems associated with thermal expansion. Nevertheless sheet lengths should be limited to those shown below.

### STRAMIT SPEED DECK® 500 DECKING – MAXIMUM SHEET LENGTH (m)

roof colour	light	dark
Flat	35	25
Spring-curved	30	20

Significant failures of pierced fixed roofing have occurred on commercial buildings where dimensional changes from thermal expansion have not been accurately incorporated in the roof design. These can result in elongation of fastener penetrations, consequent water leaks, fastener failure and unacceptable frictional noise. Through-fixed profiles which incorporate special sealing may exacerbate these problems.

## Water Carrying

**Stramit Speed Deck® 500** decking has excellent water-carrying capacity. This and the decking stiffness enable roof slopes to be as low as one degree for many applications. Roof run lengths are the combined lengths of all roof elements contributing to a single pan drainage path. This can include the roof length upstream of a roof penetration that concentrates flow into other pans. The table below gives slopes for 100 year return period rainfall intensity.

### STRAMIT SPEED DECK® 500 DECKING – MINIMUM ROOF SLOPE (degrees)

rainfall intensity mm/hr	total roof run length (m)										
	70	80	90	100	120	140	160	180	200	220	250
150	<i>Minimum Slope 1°</i>										
175											
200					1.0	1.1	1.6	2.3	3.0	3.8	5.2
225					1.0	1.6	2.3	3.1	4.0	5.0	6.8
250				1.0	1.4	2.1	3.0	4.0	5.2	6.4	8.6
275				1.0	1.8	2.7	3.8	5.0	6.4	8.0	11
300			1.0	1.4	2.3	3.4	4.7	6.2	7.8	9.7	13
325		1.0	1.3	1.7	2.8	4.1	5.7	7.4	9.4	12	16
350	1.0	1.1	1.6	2.1	3.4	4.9	6.7	8.7	11	14	18
375	1.0	1.4	1.9	2.5	4.0	5.8	7.8	11	13	16	21
400	1.1	1.6	2.3	3.0	4.7	6.7	9.1	12	15	18	24

Depth of flow in pan = 60% height of underlap (agreed industry standard)

For more information on water carrying performance of **Stramit Speed Deck® 500** decking and other Stramit roofing profiles refer to Stramit's Roof Slope Guide.

Maximum water protection is also ensured by the absence of faster penetrations when using **Stramit Speed Deck® 500** decking.

## Procurement

### Prices

Prices on **Stramit Speed Deck® 500** decking and its accessories can be obtained from your nearest Stramit location or distributor of Stramit products. As Stramit does not provide an installation service, ask your tradesperson for a supply and fix price. Contact your nearest Stramit location for the names of tradespersons in your area.

### Related Products

**Ridge Capping** – standard or custom dimensions

**Flashings** – a range of custom flashings

**Filler Strips** – top and bottom; for eaves, ridge and joint sealing

Use only where sealing is preferred to ventilation

**Insulation & roofing mesh** – a range of mesh, sisalation, plain & foil backed blanket

**Translucent sheeting** – fibreglass sheeting in a range of shades and densities

### Length

**Stramit Speed Deck® 500** decking is supplied cut-to-length. When designing or transporting long products ensure that the length is within the limit of the local Transport Authority regulations. The manufacturing tolerance on the length of product supplied is +0, -15mm.

### Ordering

**Stramit Speed Deck® 500** decking can be ordered directly, through distributors, or supplied and fixed from a roofing contractor.

### Delivery/Unloading

Delivery can normally be made within 48 hours, subject to the delivery location, quantity and material availability, or can be at a pre-arranged date and time. Please ensure that suitable arrangements have been made for truck unloading, as this is the responsibility of the receiver. Pack mass may be up to one tonne. When lifting **Stramit Speed Deck® 500** decking, care should be taken to ensure that the load is spread to prevent damage.

## Handling/Storage

**Stramit Speed Deck® 500** decking should be handled with care at all times to preserve the product capabilities and quality of the finish. Packs should always be kept dry and stored above ground level while on site. If the sheets have become wet, they should be separated, wiped and placed in the open to promote drying.

## Installation

### Fasteners

All fastening screws must conform to AS3566 – Class 3. For connecting clips to purlins use:

**For steel** (0.75bmt or greater)  
– No.10 x 16mm wafer-head self-drilling (2 per clip) & threading screws (available pre-loaded into clips in some locations)

**For timber**  
– No.10 x 25mm wafer-head type 17 self-drilling screws (2 per clip), or

– 60 x 3.75mm galvanised fluted drive nails (4 per clip)

### Accessories

Use only the correct, authentic, Stramit accessories:

**Stramit Speed Deck® 500 Clip**  
– supplied in easy to handle boxes of 50 clips

**Stramit Speed Deck® 500 End Cap**  
– used with silicone sealant for roof penetrations

### Installation

**Stramit Speed Deck® 500** decking is readily installed with or without fibreglass insulation blanket. If practical lay sheets in the opposite direction to prevailing weather.

Installation of **Stramit Speed Deck® 500** decking is a straightforward procedure using the following fixing sequence:

- 1) Ensure all purlins are in line and correctly installed. Using a string line or the edge of the first sheet, align the first row of fixing clips taking care that the clips are aligned with the arrows in the direction of laying. Screw the clips to the purlins.
- 2) Locate the first sheet over the clips with the correct projection at each end of the sheet. Snap each rib on to the clip at every purlin.
- 3) Place next clip over trailing edge of the first sheet, allowing it to fall to the purlin. Fasten clip to purlin as before.

- 4) Continue to lay sheets as before. From time to time measure coverage of sheets at ridge and eaves to maintain squareness.
- 5) At end of purlin cut fixing clip (and, if necessary, the roof sheet) to suit.
- 6) Turn up ends of sheet at ridge and turn down eaves ends into gutters using the **Stramit Speed Deck® 500** decking turn up/down tool.
- 7) Secure the leading edge of the roof with full or cut-back clips and the trailing edge with finishing clips, or sealed fasteners through the roof tray, at every purlin. Cover these with side flashings. Install all flashings as required to weatherproof and complete the roof.
- 8) Clean the roof after each day's work, removing all screws, cuttings, swarf etc, and leave roof clean and watertight. Repair any minor blemishes in colour coated finish with Stramit supplied touch-up paint.

### Insulation

Insulation blanket up to 50mm in thickness can be readily used.

### Walking

As with all roofing products, we recommend extra caution be taken when walking on the roof. When walking on **Stramit Speed Deck® 500** decking roofing always wear flat rubber soled shoes and place feet only in the pans, taking care to avoid the last pan or two near edges of the metal roof area.

### **Walk only in pans, or on ribs at purlin supports**

### Good Practice

Stramit recommends that good trade practice be followed when using this product, such as that found in Australian Standards Handbook HB39.

### Sheet Handling

Cut resistant or leather gloves should be worn when handling product. Foot protection should be worn when handling and transporting product.

### Cutting

**Stramit Speed Deck® 500** decking can be easily cut, where required, using a power saw with a steel cutting blade or a power nibbler and, for localised cutting, tin snips. Avoid the use of abrasive discs as these can cause burred edges and coating damage. Please dispose of any off-cuts carefully.

## **Additional Information**

### Maintenance

Exterior surfaces of metal products unwashed by rain can benefit from occasional washing to remove build-up of corrosive salts. Walls beneath eaves or awnings are such a situation.

### Further Information

As well as our standard range of Technical Manuals, Installation Leaflets, Case Studies and other promotional literature Stramit has a series of Guides to aid design.

Please contact your nearest Stramit location for any of these guides, other literature, or refer to Stramit website [www.stramit.com.au](http://www.stramit.com.au)

### Other Products

Stramit offers a wide range of building products, including:

- Purlins and girts
- Formwork decking
- Roof and wall sheeting
- Lightweight structural sections
- Truss components
- Gutters and downpipes
- Fascias
- Custom flashings
- Insulating products
- Fasteners

### Patents

**Stramit Speed Deck® 500** decking is protected by a registered design.
